

Safes «**LuCell**» are modern and stylish. Differ not ordinary design and lustrous gloss. Focused on both fire resistance & upgraded anti-burglary functions. It is the first time that such superior design was applied to a safe. Safes of this series create an positive.

**Technical characteristics:**

- Safes are certificated on fire resistance (120 min) in Korea and Sweden.
- Upgraded Anti-burglar function – Hidden hinges - More difficult to cut the hinges from the outside. In addition to the current pin locker, LuCeLL has glass re-locker to protect the whole locking device.
- 25mm of bigger live locking bolts and dead bolts.
- Additional steel plates welded inside to protect the bolts under attack.
- Front panel has no holes, eliminating the possibility for intruders to access through holes for key or handle.
- Automatic lock activation (motorized locking) - the door locks automatically when it is closed-.
- The touch coded lock.
- The door's front panel has an aluminum frame, with the necessary flexibility to bend in case an intruder tries to pry the door open using a lever.
- Due to its separate structure, the electronic lock does not open the door even if it is broken or exposed to an electric shock.
- An additional cover around the outside of the safe provides even more confidence.
- Internal the cash branch, closed by a key.
- The additional tray with the cells, finished with a velvet, for small values.
- Leather pockets on an inside of a door for storage of credit cards.
- A high-sensitivity alarm with 120db(car horns average 115 db).
- Power - 4 batteries of type AA.
